Lesson 1

Food Chains

In this lesson we will recap our learning of Food Chains. Remember the key words linked to Food chains (Producers, Consumers, Prey and Predators).

Producers

Plants are called producers. This is because they produce their own food! They do this by using light energy from the Sun, carbon dioxide from the air and water from the soil to produce food - in the form of glucose/sugar. The process is called photosynthesis.

Consumers

Animals are called consumers. This is because they cannot make their own food, so they need to consume (eat) plants and/or animals.

Predators and Prey

A predator is an animal which hunts and eats other animals, and the prey is the animal that gets eaten by the predator.
